

Jigsaw Business helps leading bedroom retailer achieve productivity targets

When Sharps required a fully integrated business system able to integrate with their existing systems and transfer data from CAD to manufacture, they selected Jigsaw Business from Profactum.

"The software has allowed us to meet our productivity targets as the business grows and it really makes life easier for Sharps! Our relationship with Profactum works well because they understand our business, get involved with the product and share our passion for it."

CAD Systems Operations Manager, Sharps Bedrooms

Sharps Bedrooms is the UK's leading fitted bedroom specialist, providing a design and fit bedroom and office service to the domestic market. Sharps Bedrooms & Home Office Furniture offers a full range of modern, contemporary and traditional fitted bedroom and home office furniture.

A bespoke system was developed based around the Jigsaw Business solution, including:

- CAD design rule verification to check each design and ensure that regulations are adhered to and no corners are cut in the design process, avoiding costly errors. Jigsaw Business provides Sharps with the facility to develop and maintain their own rules accordingly.
- Cutting list for framing material & CNC instructions fed directly to shop floor machines to automate the manufacturing process.
- 3D-room model allowing you to automatically cut doors to fit complex details such as sloping ceilings, roof beams and floor boxes. Cutting patterns for the resulting door shapes are fed automatically to the factory.
